ABSTRACT OF THE DISCLOSURE

This invention provides a combination hat and integral storage pouch comprises a crown having a top portion including first and second layers joined together. The second layer has a closure means, such as a zipper, extending along a longitudinal midline from one end to another end thereof, and defines a space therebetween to store a portion of the hat. The hat also includes a sidewall extending essentially perpendicularly from the first and second layers, and sized to fit a wearer's head, and a brim extending outwardly from the crown and attached thereto.
